

## Welcome Back MYP Math 9!

	Assignment Effort Grade (Circle One)	Comments (What was interesting or challenging?)
Monday Date: <u>11/27</u> Topic: <u>13D - 13E Review</u>	0 1 2	
Tuesday Date: <u>11/28</u> Topic: <u>Review</u>	0 1 2	
Wednesday Date: _____ Topic: _____	0 1 2	
Thursday Date: _____ Topic: _____	0 1 2	
Friday Date: _____ Topic: _____	0 1 2	

## Class Plan:

1. Warm-up

2. Area of a triangle Investigation

**c**

Chapter 25

**THE SINE RULE**

3. Example

4. Practice

In any right angled triangle with one angle  $\theta$ , we have:

$$\sin \theta = \frac{\text{OPP}}{\text{HYP}}, \quad \cos \theta = \frac{\text{ADJ}}{\text{HYP}}, \quad \tan \theta = \frac{\text{OPP}}{\text{ADJ}}$$

**C****THE SINE RULE**

**h = height**  
**b = base**

**Area of Triangle**

$$\frac{1}{2} b \times h$$

**C****THE SINE RULE**

Warm-up: Find the area of each triangle.

$$A = \frac{1}{2}(8)(7)$$

$$A = \frac{1}{2}(56)$$

$$A = 28 \text{ in}^2$$

$$A = \frac{1}{2}(6)(7)$$

$$A = \frac{1}{2}(42)$$

$$A = 21 \text{ cm}^2$$

??

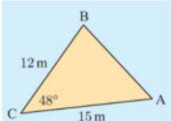

## B Investigation THE AREA OF A TRIANGLE

How do we find the area of a triangle if we are **not** given the height?

Do: Steps 1 - 4  
Whole group:  
Part 5 (aka "6")

Done?: Help others in steps 1 - 4.

Area of a triangle using trigonometry Name \_\_\_\_\_

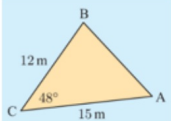

12 m  
48°  
15 m

1) Find  $48^\circ$ . How do the side lengths AC and BC relate to the angle  $48^\circ$ ?

This angle will be call the \_\_\_\_\_ angle.

2) Draw segment BD so that BD and AC form a right angle.

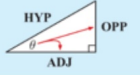

12 m  
48°  
15 m

3) Use trigonometry to find the length of BD.

In any right angled triangle with one angle  $\theta$ , we have:

$$\sin \theta = \frac{\text{OPP}}{\text{HYP}}, \quad \cos \theta = \frac{\text{ADJ}}{\text{HYP}}, \quad \tan \theta = \frac{\text{OPP}}{\text{ADJ}}$$

4) Use the length of BD as the height and AC as the base of the triangle. Find the area of triangle ABC.

## B Investigation THE AREA OF A TRIANGLE

### Solution

1) Find  $48^\circ$ . How do the side lengths AC and BC relate to the angle  $48^\circ$ ?

**Included  
(in between)**

This angle will be call the \_\_\_\_\_ angle.

## B Investigation THE AREA OF A TRIANGLE

2) Draw segment BD so that BD and AC form a right angle.

3) Use trigonometry to find the length of BD.

$$\left( \sin 48 = \frac{h}{12} \right) 12$$
$$12 \cdot \sin(48) = h \approx 8.92$$

In any right angled triangle with one angle  $\theta$ , we have:

$$\sin \theta = \frac{\text{OPP}}{\text{HYP}}, \quad \cos \theta = \frac{\text{ADJ}}{\text{HYP}}, \quad \tan \theta = \frac{\text{OPP}}{\text{ADJ}}$$

## B Investigation THE AREA OF A TRIANGLE

### Solution

4) Use the length of BD as the height and AC as the base of the triangle. Find the area of triangle ABC.

$$h = 12 \sin(48^\circ) \approx 8.92$$

$$A = \frac{1}{2} b \cdot h$$

$$A = \frac{1}{2} (15)(8.92)$$

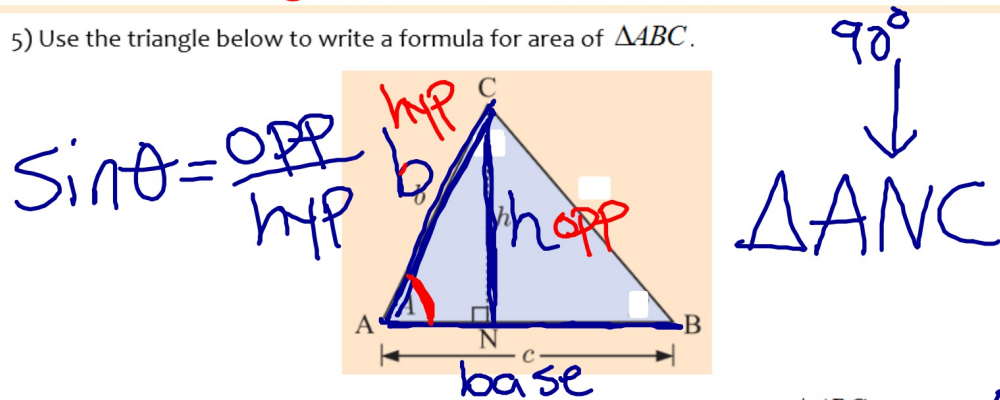

$$A \approx 66.9 \text{ m}^2$$

## B Investigation THE AREA OF A TRIANGLE

5) Use the triangle below to write a formula for area of  $\triangle ABC$ .

a) Use side AB (side  $c$ ) as the **base** of the triangle. Find the height ( $h$ ) of  $\triangle ABC$  in terms of  $b$  and the sine of an angle.

$$\sin A = \frac{h}{b} \quad h = b \cdot \sin(A)$$

b) Find the area of  $\triangle ABC$ .

$$A = \frac{1}{2} (c)(b \cdot \sin A)$$

## B Investigation THE AREA OF A TRIANGLE

### Solution

c) Use side AB (**side c**) as the **base** of the triangle. Find the height (**h**) of  $\triangle ABC$  in terms of  $a$  and the sine of an angle.

$$\sin B = \frac{h}{a} \quad h = a(\sin B)$$

d) Find the area of  $\triangle ABC$ .

$$A = \frac{1}{2}(\text{base})(\text{height})$$

$$A = \frac{1}{2}(c)(a)(\sin B)$$

## B Investigation THE AREA OF A TRIANGLE

### Solution

e) Suppose there is a different base and height drawn in  $\triangle ABC$ . What is the formula of the area of  $\triangle ABC$ ?

$$\sin C = \frac{H}{b} \quad \text{base} = a (\overline{BC})$$

$$H = b(\sin C)$$

$$A = \frac{1}{2}(a)(b)(\sin C)$$

**B****THE AREA OF A TRIANGLE**

So far we have only been able to calculate the area of a triangle using the base and the perpendicular height.

However, we may not know the perpendicular height, especially if the triangle is not right angled.

We can use trigonometry to find the area of a triangle if we are given the lengths of **two sides**, as well as the **included angle** between the sides.

B

## THE AREA OF A TRIANGLE

$$\text{area} = \frac{1}{2}ab \sin C$$

"one half **a** times **b** times the **sine** of the **angle** between them!"

The **area of a triangle** is a half of the product of two sides and the sine of the included angle.

**B****THE AREA OF A TRIANGLE**

**Proof** (for the case where  $A$  is acute):

Consider triangle  $ABC$  in which the sides opposite angles  $A$ ,  $B$ , and  $C$  are labelled  $a$ ,  $b$ , and  $c$  respectively.

Suppose  $N$  lies on  $[AB]$  such that  $[CN]$  is perpendicular to  $[AB]$ .

The area of  $\triangle ABC = \frac{1}{2} \times AB \times CN = \frac{1}{2}ch$  .... (1)

However, in  $\triangle ANC$ ,  $\sin A = \frac{h}{b}$

$$\therefore h = b \sin A \quad \dots (2)$$

Substituting (2) into (1) gives  $\text{area} = \frac{1}{2}c(b \sin A) = \frac{1}{2}bc \sin A$

Similarly, if the altitudes from  $A$  and  $B$  were drawn, it could be shown that  $\text{area} = \frac{1}{2}ac \sin B = \frac{1}{2}ab \sin C$ .

# Break time!

**Example 3**

Find the area  
of  $\triangle ABC$ :

**Example 3**

Find the area  
of  $\triangle ABC$ :

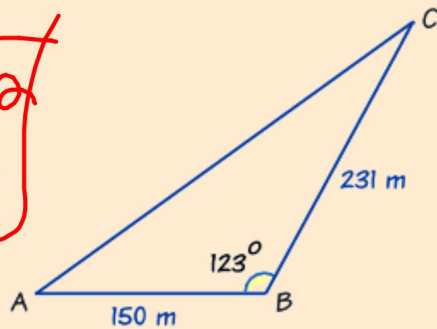

$$\begin{aligned}\text{Area} &= \frac{1}{2}ab \sin C \\ &= \frac{1}{2} \times 12 \times 15 \times \sin 48^\circ \\ &\approx 66.9 \text{ m}^2\end{aligned}$$

Example: Find the area of triangle ABC.

$$A = \frac{1}{2}ab \sin C$$

$$A = \frac{1}{2}(150)(231) \sin 123^\circ$$

$$A \approx 14530 \text{ m}^2$$

## Exercises...Page 491

### EXERCISE 25B

$$\text{area} = \frac{1}{2}ab \sin C$$

1 Find the area of:

$$A = \frac{1}{2}(10)(8)\sin(40)$$

$$A = 5 \cdot 8 \cdot \sin(40) \approx 25.7 \text{ m}^2$$

## Exercises...

d

e

f

## Exercises...

$$180 - 78 - 61$$

2 Find the area of:

a

b

c

$$A = \frac{1}{2} (8)(9) \sin(41^\circ)$$

$$A \approx 23.6 \text{ cm}^2$$

## Exercises...

3

- a Find the areas of triangles **A** and **B**.
- b Explain why the triangles have the same area.

DE

## Exercises Solutions...

### EXERCISE 25B

- 1**   **a**  $\approx 25.7 \text{ m}^2$       **b**  $\approx 21.0 \text{ cm}^2$       **c**  $\approx 30.9 \text{ cm}^2$   
     **d**  $\approx 33.0 \text{ m}^2$       **e**  $12 \text{ m}^2$       **f**  $\approx 1.52 \text{ km}^2$
- 2**   **a**  $\approx 9.79 \text{ m}^2$       **b**  $\approx 23.6 \text{ cm}^2$       **c**  $\approx 6.49 \text{ m}^2$
- 3**   **a** Area **A**:  $85 \text{ m}^2$ , Area **B**:  $85 \text{ m}^2$   
     **b** Triangles have the same area because the sides used are the same length and  $\sin 30^\circ = \sin 150^\circ$ .
- 4**  $x \approx 20.0 \text{ m}$       **5**  $\approx 58.1 \text{ cm}^2$       **6**  $\approx 43.5 \text{ cm}^2$
- 7**  $\approx 33.4 \text{ cm}^2$
- 8** **Hint:** Let  $AM = a$ ,  $AN = b$ , and  $\widehat{BAC} = \theta$ .  
     Show that both triangles have area  $ab \sin \theta$ .
